

GS1200v3 Series

5-Port/8-Port GbE Web Managed Switch

The GS1200 Series Web Managed Gigabit Switch provides simple control for better management. Unlike other advanced but complex managed switches, this series of switch is suitable for most users and provides an affordable solution with essential features including VLAN, QoS, IGMP snooping, link aggregation, and port mirroring. These functions can be completed in just a few simple clicks through an easy, friendly, and intuitive Web GUI.

There are five models for GS1200 series, coming with non-PoE (GS1200-5v3/8v3) to connect to devices including PCs, NAS, and print servers, PoE capable (GS1200-5HPv3/8HPv3) to provide power to IP CAM, wall mounted AP and PoE standard devices, and fiber uplink (GS1200-10v3) for easily deployment in hallways to connect network devices on the same floor and link them back to the core network.

Easy web management

PoE model supports 802.3at, with PoE availability up to 68W

Supports link aggregation, QoS and multicast IGMP snooping

Virtual LAN for enhanced network security

Design with fanless and LED ECO mode for disturbance free operation experience

Advanced energy-savings at work

Easy web management

This switch caters to most users and is an affordable solution with essential features including VLAN, QoS, IGMP snooping v1/v2 and v3 compatible, link aggregation, and port mirroring. These smart features are easily configurable through a user-friendly web-based interface. It's the most ideal solution to simplify networks for home and small office users.

Smart PoE+ support

The GS1200 PoE models support the IEEE 802.3at PoE+, providing a maximum of 30 watts per port (with a max total power budget of 68 watts) to supply power to PoE network devices like wireless APs, IP cameras and VoIP phones. Web GUI management enables you to monitor the power status on each port and/or reboot the network devices, as needed.

Quality of Service

Port-based Quality of Service for better voice and video traffic control. Optimizing access bandwidth on the network.

Link aggregation

Increases bandwidth by aggregating two Ethernet ports, using Link Aggregation Control Protocol (LACP) to dynamically manage and optimize the combined uplink/downlink traffic for improved network performance and redundancy.

VLAN

Segregating network into small groups for enhanced network security and efficiency.

IGMP snooping

Optimizing network efficiency on multicast traffic delivery without the need of an extra multicast router.

Experience whisper-silent and energy-saving operations

Compliant with the IEEE 802.3az Energy Efficient Ethernet standard, the GS1200 Switch offers power-saving benefits by detecting link status and consuming power more efficiently. The fanless design ensures all-time silent operation to blend into noise-free working environments. Also, you can deactivate the Ethernet port LEDs for distraction-free operation by switching to LED ECO mode through the front panel button or the web-based interface.
